

Reflection Prompts

- What strategies did you find useful with this task? Why?
- What were your strengths and stretches? Why?
- What are you proud of? Why?

Students can also reflect on what they might need to work on for next time:

- I am working on...
- What I learned about myself as a mathematician is...

Samples:

- The skip counting by 7 was difficult because...
- The skip counting by 5 was easy because the pattern of the digits in the ones place alternates between two numbers and the number in the tens place going up by 1 every third number.
- When decomposing a number, I like to show different ways that I can make ten because it is such a useful number in math.
- I find the number line easy because I know that I need to put the middle benchmark on the line and then the benchmark in the middle of the half where the target number is.
