Operations SNAP

Equation: $34 \times 26 = 884$

Use a strategy to estimate the answer: Round

$30 \times 30 = 900$

$3 \times 3 = 900$

$30 \times 30 = 900$

Show one way to solve the equation: Decomposing

$34 \times 26 = 884$

$30 \times 6 = 180$

$30 \times 20 = 600$

$4 \times 6 = 24$

$4 \times 20 = 80$

$$\begin{array}{r}
 600 \\
 180 \\
 + 24 \\
 \hline
 884
 \end{array}$$

Show another way to solve the equation: write

$34 \times 26 = 884$

34

$\times 26$

$\hline 204$

$+ 680$

$\hline 884$

Write a real-life example or a math story or problem:

There were 34 lambs, and 26

people came out of each lambda.

How many people came to the party. The answer is 884.

Reflection: Reflect on how I did on

my strategies, and my printing.

I use 1 strategie most of the time. I also usually have messy printing.

Write a real-life example or a math story or problem:

There's a cookie factory they sell 31 cookies a year it's been 26 year after they started the cookie factory how many cookies did they sell. Answer: 814

Reflection:

I thought that we were supposed to do the rounding differently but we were supposed to round it to the nearest 10 and the multiply I got hang of Decomposing with 2 digits.
